DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2 and 4-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Roffman et al. Roffman et al teaches a corneal contact lens having a central zone (22) having at least a first curvature (R1), at least a first annular zone (23) located concentrically around the central zone (22), the first annular zone (23) having at least a second curvature (R2, R3, R4) where the origin of the first curvature and the origin of the second curvature are not coaxial (see col. 2, lines 3-6). As shown in the illustration of Fig. 2, the at least second curvature (R2, R3, R4) of the first annular zone (23) is flatter than the first curvature (R1) of the central zone (22). The contact lens of Roffman et al further has at least a second annular zone located concentrically around the first annular zone (see col. 2, lines 9-13). Note, the at least one additional annular zone can be, but does not have to be of the same cross-sectional shape as that of the first annular zone. The central zone can be spherical or aspherical. The first annular zone

can have a curvature selected from the group consisting of spherical, aspherical, polynomial or spline (these include toric) (col. 2, lines 3-6).

Response to Arguments

Applicant's arguments filed March 10, 2003 have been fully considered but they are not persuasive. The affidavit filed on March 10, 2003 under 37 CFR 1.131 has been considered but is ineffective to overcome the Roffman et al reference. The scope of the affidavit is not commensurate with the scope of the claims. Particularly, although it is stated that, "To match the curvatures of the central and leading zones, the origin of the curvature of the "S" curve zone required that it be non-coaxial to the origin of the central curve zone", this would appear to be a **conclusion** not **clearly** supported by Exhibit A. Also, there are no **"S" curve zones** recited in the claims.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
